

E-HEALTH CARE IN HUNGARY WITH THE HELP OF ICT TOOLS

Balázs SZABÓ*

ABSTRACT: *In addition to the smartphone applications, some specialized administrative bodies of the public administration have additional opportunities to facilitate the activities of the authorities. One of the important technical and development tools of the 21st century, is the big variety of drones, which were originally developed for military purposes. The another most important info-communication tools (hereinafter: ICT) are the smarth-phones. Undoubtedly, these equipments can be apostrophized as probably the most popular technical tools, based on the fact that in addition to their ever-expanding uses, they also provide excellent help for leisure activities and outdoor photo/video documentation. In addition, we can find their application in more and more fields of our Hungarian public administration system. In recent years, the use of smartphones and applications on them, has been successfully introduced in more and more administrative areas, which makes the work of the authorities more efficient and faster, which in many cases can lead to the saving of human lives too. After (!) the Corona virus pandemic, I have no doubt about, that the health care, and the e-solutions, developements helped a lot till nowadays, and it will be just more important in the next years as well. I will highlighted some of the good practices that I consider to be most important and may give some positive expressions to implement them in other fields.*
